Robert Feltmann, Vice Principal of Pupil Services
David P. Falleni, Director of Athletics

Larrie Reynolds, Ed. D., Superintendent of Schools

September 27, 2017

Dear Parent/Guardian:

We were recently informed that one of our students was diagnosed with viral meningitis. There may be an additional diagnosis pending lab results. While this can be upsetting, **the chance of your child or you also becoming ill with this disease is very small.** Viral meningitis is not the same as bacterial meningitis. People who get viral meningitis usually recover completely with rest and fever-reducing medicine. The following information will help you understand viral meningitis:

- Viral meningitis can occur throughout the year, but is most common in the summer and fall. People of any age can get viral meningitis, but it is more frequent in children.
- About 90% of viral meningitis cases are due to common stomach viruses called enteroviruses. Enteroviruses are passed from person to person through stool or saliva (spit), but most people who come in contact with enteroviruses do not develop an infection. This is because their immune system fights the virus successfully.
- Getting infected with one of the germs that can cause viral meningitis does not automatically mean a person will get meningitis. In most cases, the germ will simply cause a cold, upset stomach or diarrhea.
- There is no specific prevention for viral meningitis. However, good personal hygiene, such as frequent hand washing, can reduce the chances of catching viral meningitis and other illnesses.
- Antibiotics are not effective against viruses.

If you have any questions or would like additional information, please contact your family doctor or the Mount Olive Department of Health at 973-691-0900 x7330. Please do not call the school with questions or for an update on the student's condition, as it is in violation of the Health Insurance Portability and Accountability Act (HIPPA) and the Family Educational Rights and Privacy Act (FERPA). School administrators will work closely with public health officials to keep you informed of the situation.

Sincerely,

Kevin R. Stansberry

Kevin R. Stansberry
